

SR-39 Improvements Planned from Huntsville to Causey, July 8-29

Project will improve drainage, repave several locations, and apply chip seal

The Utah Department of Transportation (UDOT) advises motorists of a roadway improvement project beginning July 8, on state Road 39, the Monte Cristo Highway, between the 100 South (Main Street) junction in Huntsville (milepost 19.32) and the Causey Reservoir turn-off (milepost 27.72).

For all phases of work, motorists should expect multiple flagging operations and up to 10-minute travel delays where work is occurring on weekdays from 7 a.m. to 7 p.m. On Fridays, lane restrictions will end by noon to facilitate area recreational travel.

The project includes installation of several drainage culverts, asphalt pavement overlays in several areas, shoulder grading and application of a chip seal (an oil-sealed gravel chip surface which will seal the pavement from moisture and extend its life).

The work will be conducted according to the following *tentative schedule:

- Week of **July 8** – culvert installation
- Week of **July 14** – asphalt paving, shoulder grading and gravel chip placement
- Week of **July 21** – sealing of chip seal surface (no work is planned July 24 in observance of the Pioneer Day holiday)
- Week of **July 28** – lane striping

A concurrent chip seal project will be completed by the same contractor on 100 South (Main Street) in Huntsville between the SR-39 junction and Huntsville Cemetery. For more information on this project, contact Huntsville Town offices at 801-745-3420.
